THREE WEBSITE PROJECTS

Short Report: Purpose, Features and Design

This report describes the three websites shown in the supplied screenshots. Screenshots 1–2 belong to the Digital Library, screenshot 3 belongs to FoodieHub Restaurant, and screenshots 4–5 belong to NRI FEST 2026.

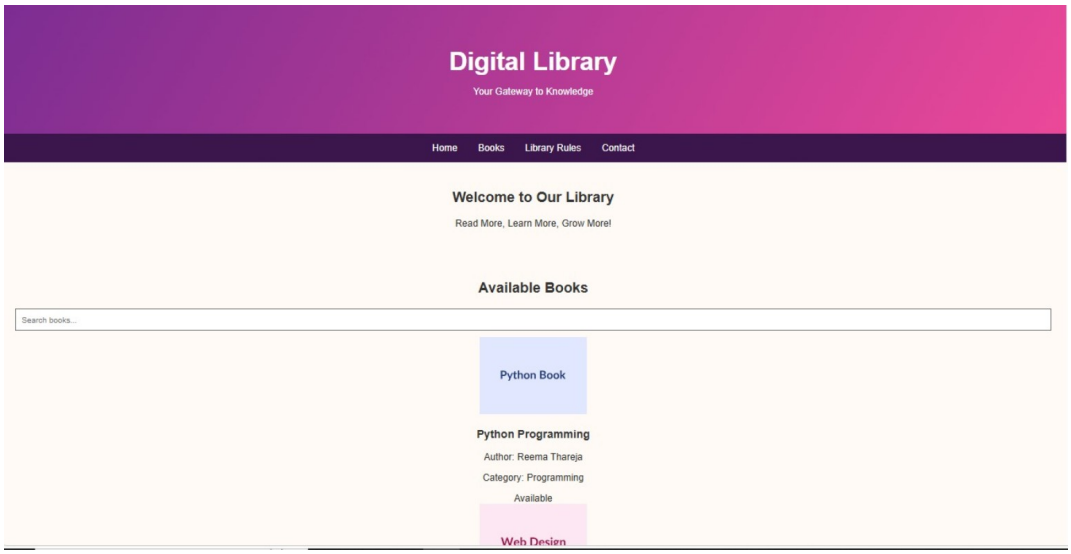

1. Digital Library Website

Purpose: To help students browse a book catalogue and see whether books are available or issued.

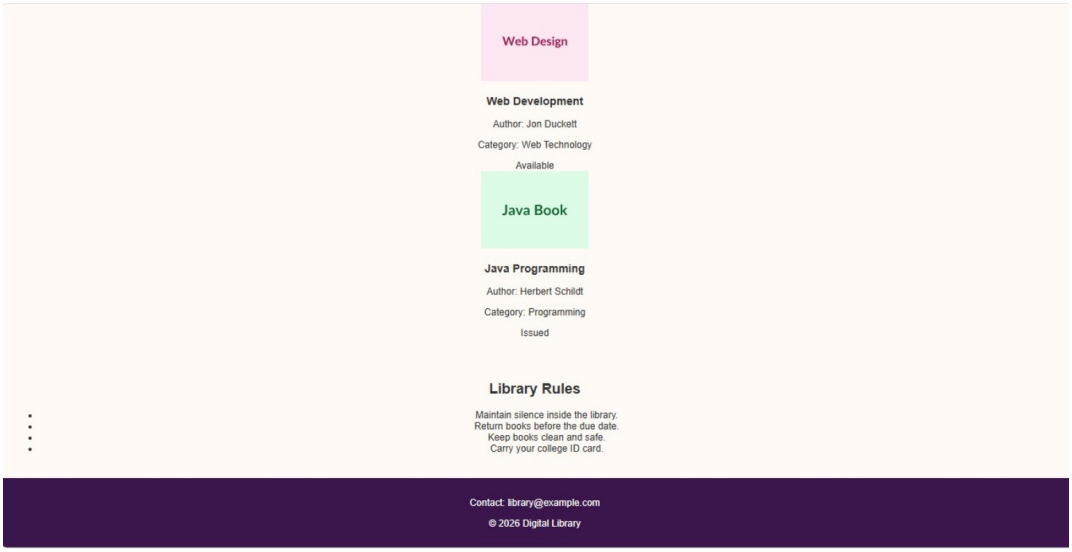

Main features: Header and tagline; navigation links for Home, Books, Library Rules and Contact; a welcome section; book cards showing title, author, category and status; a search field; library rules; and a footer with contact information.

Design: A purple-pink gradient header, dark navigation and footer bars, light page background, and colored book panels. HTML can create the content, CSS can style it, and JavaScript can make the search field filter books.

Benefits: Makes book details easy to scan and gives students a single place to find library rules and contact details.

2. FoodieHub Restaurant Website

Purpose: To promote a restaurant and encourage visitors to explore its menu or order food.

Main features: FoodieHub branding; Home, Menu, Offers and Reviews navigation; restaurant location and displayed rating/hours; a food photograph; a headline and “Explore Menu” button; and a footer with contact information.

Design: A dark navy header and footer contrast with a warm gradient hero section. A large food image draws attention to the restaurant. HTML and CSS can build the page, while JavaScript can support menu browsing and interactive buttons.

Benefits: Highlights restaurant information and food visually. Before publishing, confirm the displayed opening hours, rating, delivery offer and contact details.

3. NRI FEST 2026 Website

Purpose: To advertise a college festival and share event, registration, schedule and contact information.

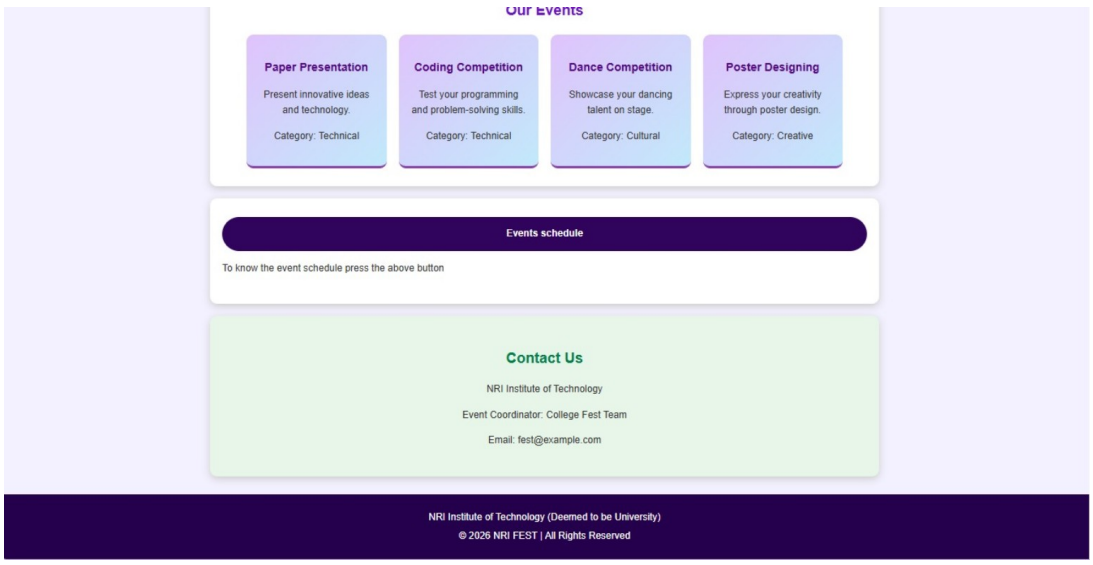

Main features: Festival banner and theme; “Register Now” button; Home, Schedule and Contact navigation; welcome card; event cards for Paper Presentation, Coding Competition, Dance Competition and Poster Designing; schedule section; contact details; and footer.

Design: A colorful gradient banner, bright title and registration button, rounded navigation, pastel event cards and separate information panels. HTML structures the sections, CSS styles them, and JavaScript can make registration and schedule controls interactive.

Benefits: Organizes festival information clearly and helps participants discover events. A complete version could connect the registration button to a form and show an actual event timetable.

Conclusion

The three projects demonstrate different purposes: education and book browsing, restaurant promotion, and college-festival information. All can be created using HTML and CSS, with JavaScript added for interactive features. Test links and buttons and make sure the layouts work on phones and computers.
